

# Modulex Preventative Maintenance Kits

To perform the necessary tasks indicated in the maintenance schedule of the Modulex O&M, AERCO offers a complete line of maintenance kits and fireside inspection kits.

- The Maintenance Kits consist of the spark ignitor and flame detector (with gaskets) for each module.
- The Fireside Inspection Kits consist of the spark ignitor, flame detector, and burner gasket for each module, flue collector gasket, and exhaust connector gasket.

*NOTE: The Fireside Inspection Kit already includes the components included in the Maintenance Kit - therefore, when performing the Fireside Inspection, you only need the Fireside Inspection Kit, not both.*

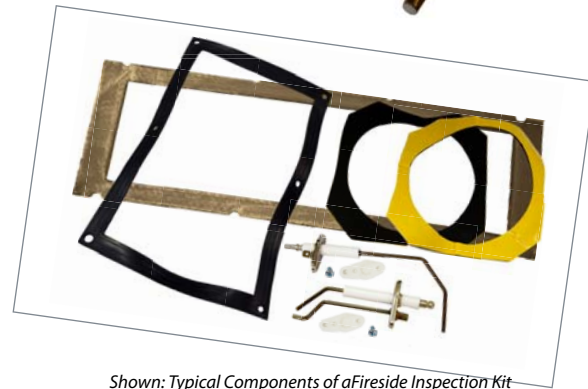

### Estimated Labor Time:

- Maintenance Kits: 30 minutes
- Fireside Inspection Kits: 1-2 hours (dependent on kit)

For further information visit [www.aerco.com](http://www.aerco.com).
